Underground Storage Tank Closure Report, prepared by
Geolnsight, Inc., dated June 9, 2015

Dear Mr. Godlewski:

The New Hampshire Department of Environmental Services (DES) has completed its review of the above referenced report related to the removal of two gasoline underground storage tanks (USTs). DES approves the report as meeting the requirements of Env-Or 408.10.

Based upon the information contained in the report, it does not appear that a discharge of petroleum that would ultimately impact surface water or groundwater of the State has occurred related to this tank system. Therefore, DES will not require additional investigation or remedial measures related to this UST removal project. This project was conducted by DES's MtBE Remediation Bureau and since it does not appear that a discharge of petroleum containing MtBE has occurred, DES has closed the MtBE project (#34959).

Please note that the owner(s) of this facility must meet the goals of the N.H. Administrative Rules Env-Or 600, *Contaminated Site Management*. That is, groundwater at the site must continue to meet drinking water quality standards. The owner shall not undertake any activities that might result in Ambient Groundwater Quality Standards being exceeded at the site. DES reserves the right (under N.H. Administrative Rules Env-Or 600, *Contaminated Site Management*) to require hydro-geological investigations and/or remedial measures if further information indicating the need for such work becomes known.

Please do not hesitate to contact me if you have any questions regarding this letter.

Sincerely,

John Pasquale, P.G.
