Underground Storage Tank Closure Assessment, prepared by
Ransom Consulting, LLC, dated December 9, 2022

Dear Mr. Kahlon:

The New Hampshire Department of Environmental Services (NHDES) has completed its review of the above-referenced report related to the in-place closure of the following underground storage tanks (USTs):

- Tank #5A, a 10,000-gallon gasoline UST.
- Tank #5B, a 6,000-gallon gasoline UST.
- Tank #5C, a 4,000-gallon diesel fuel UST.
- Tank #6, a separate 2,000-gallon kerosene UST.

NHDES approves the report as meeting the requirements of [Env-Or 408.10](#).

We have also reviewed other information in our files regarding the petroleum released at the referenced site. Based on the detection of methyl tert-butyl ether (MtBE) in soil sample UST 5C-B at a concentration above New Hampshire Soil Remediation Standards, NHDES will require additional investigation measures related to these tank closures. The necessary investigation measures will be addressed under separate cover by the site project manager. Monitoring requirements related to previous releases must continue as directed by NHDES and Groundwater Management Permit #GWP-199110092-T-003.

Please note that this letter only applies to the tank closure activities at this site, but does not close the site. Site closure and the issuance of a Certificate of No Further Action cannot occur until the remaining contamination and other outstanding NHDES requests have been satisfactorily addressed.
