**RE: WORK PLAN FOR SAMPLING OF WATER SUPPLY WELLS AND PROVISION OF ALTERNATE WATER – ADDENDUM 2  
SAINT-GOBAIN PERFORMANCE PLASTICS  
701 DANIEL WEBSTER HIGHWAY, MERRIMACK, NEW HAMPSHIRE  
NHDES SITE NO. 199712055**

Dear Mr. Marts:

On behalf of Saint-Gobain Performance Plastics (SGPP), Golder Associates Inc. (Golder) is submitting this Addendum 2 to the Work Plan for Sampling of Water Supply Wells and Provision of Alternate Water to the New Hampshire Department of Environmental Services (NHDES).

Golder submitted the Work Plan for Sampling of Water Supply Wells and Provision of Alternate Water to NHDES on September 30, 2019 (September 2019 Work Plan, Golder, 2019a). In a letter dated October 3, 2019 (NHDES, 2019a), NHDES approved the sampling proposed in the September 2019 Work Plan and requested “a list of properties...for the next round of sampling that includes, but is not necessarily limited to, properties that are proximal to wells with PFOA concentrations that are above the AGQS of 12 ppt”.

In response to the October 3, 2019 NHDES request, Golder submitted the Work Plan for Sampling of Water Supply Wells and Provision of Alternate Water – Addendum 1 on November 1, 2019 (Work Plan Addendum 1). In a letter dated November 5, 2019 (NHDES, 2019b) NHDES approved Work Plan Addendum 1 and requested:

- Sampling of water supply wells at schools and licensed child care facilities within the Outer Boundary
- Sampling or confirmation of water supply status of properties that were assumed to be connected to a public water supply and adjacent to properties that are eligible for alternate water
- Implementation of a dynamic strategy that continues to work to identify impacted water supply wells.

The objective of Addendum 2 is to identify additional wells for sampling including the wells requested by NHDES’ in the November 5, 2019 approval of Work Plan Addendum 1. Addendum 2 supplements the September 2019 Work Plan, which provides detailed descriptions of work plan objectives, evaluations, data sources, sampling methodology and reporting requirements.

### **Identification of Wells for Sampling**

Golder utilized the following screening approach to identify properties for sampling during the Addendum 2 sampling event. Properties within the Outer Boundary that do not meet these initial screening criteria will be considered in subsequent sampling events as described in Section 3.2 of the September 2019 Work Plan.

- **Water Supply Wells at Schools and Licensed Child Care Facilities within the Outer Boundary:** Tables 1 and 2 list licensed schools and child care facilities identified by Golder within the Outer Boundary as shown on Figure 1. These facilities were located using information obtained from the New Hampshire Department

of Education website, the New Hampshire Online Licensing system, or provided by NHDES. The water supply system status presented on Tables 1 and 2 is based on information from NHDES, municipal water suppliers, or telephone discussions with the facilities. Properties with licensed schools or child care facilities identified as not connected to a public water supply are included in Addendum 2 for sampling or confirmation of water supply status, as shown on Figure 2 and Table 3. For schools and child care facilities connected to public water supplies, Golder will work with NHDES to determine if water supply wells are present on those properties, and if those water supply wells have completed sampling required by Env-Dw 700.

- **Proximal Parcels that were “Assumed Connected”:** In Work Plan Addendum 1, Golder identified “Proximal Parcels” to properties that have been offered interim alternate water. However, the list of “Proximal Parcels” identified for sampling in Work Plan Addendum 1 excluded properties within 150 feet of an existing water line that were preliminarily assumed to be connected to a water line and were assigned a lower sampling priority. Properties that are within a 60-foot offset on the boundary of properties that have been offered interim alternate water<sup>1</sup> and within 150 feet of an existing water line, are included in Addendum 2 for sampling or confirmation of water supply status, as shown on Figure 2 and Table 3.
- **Distance from Wells Previously Sampled or Properties Proposed to be Sampled:** Golder identified a subset of properties in areas of relatively lower density of existing analytical results or where no properties are currently proposed to be sampled. These properties are included in Addendum 2 for sampling or confirmation of water supply status, as shown on Figure 2 and Table 3.

### Next Steps and Schedule

Following NHDES approval of Addendum 2 to the September 2019 Work Plan, SGPP will complete the following activities:

- Within 30 days of Addendum approval initiate contact with and provide access agreements to owners of properties identified for sampling under this addendum.
- Coordinate sampling of a property’s well(s) within 60 days of access agreement acceptance by the property owner(s).

The schedule for responding to results and reporting to NHDES is included in Section 5 of the September 2019 Work Plan.

If you have any questions regarding this Work Plan Addendum, please call Mr. Ross Bennett at (603) 668-0880.

Sincerely,

**Golder Associates Inc.**

Alistair P.T. Macdonald, P.G., LSP  
*Senior Program Leader and Principal*

Ross Bennett, P.E.  
*Senior Consultant*

<sup>1</sup> The list of properties that have been offered interim alternate water includes the properties identified in Table 1 of the September 2019 Work Plan and several parcels identified by Golder or NHDES as eligible for alternate water since submittal of the September 2019 Work Plan but before December 9, 2019.

## Notes:

1) Properties identified for sampling as described in the Work Plan for Water Supply Wells and Provision of Alternate Water - Addendum 2, dated December 13, 2019.

2) SLUC = State Land Use Code

Prepared by: BDL

 Reviewed by: APTM

LEGEND

- Saint-Gobain Merrimack Facility
- Pre-GMZ Boundary (see Note 1)
- Outer Boundary (see Note 1)
- Town Boundary
- △ Child Care Location
- School Location
- Water Supply Source Uncertain
- Connected to Community Public Water Supply System
- Connected to Non-Transient Non-Community Public Water Supply System

Property-Water Main Status

- Access to Alternate Water (if applicable) confirmed by Consent Decree
- Connection to PWS Confirmed
- Access to Water Main is Likely

- Access to Water Mains is not Likely
- Potential Other Sources

Potential Other Sources

- Fire Stations 2500 ft Buffer
- Airport Potential Source Boundary
- Landfill Boundary 2000 ft Buffer
- Landfill - Approximate GMZ Boundary Before AGQS Revision
