

Isinglass River Local Advisory Committee

Annual Report 2019

The Isinglass River Local Advisory Committee (IRLAC) held seven regular meetings and one site walk in 2019. Two LAC members attended the NHDES LAC spring workshop held in Concord. During the past year, IRLAC members reviewed and commented on two applications to NHDES. We continue to maintain our web page in order to provide an updated link with our communities. Water quality testing continued during the summer months in coordination with the NHDES VRAP program. Water quality testing results continue to indicate that the river is in good health. Results are consistent with previous years and happily, no new problem areas have been found. We continue to work well with Waste Management, who is the major riparian landowner along the Rochester portion of the river. The IRLAC meets on the second Monday of the month in the Waste Management Conference Room, located on Rochester Neck Road in Rochester. The public is invited to attend.
