Rivers 101: How a River Works & the Mad River Restoration Project

Workshop Purpose: As communities work to effectively protect citizens and their property from the results of river flooding and bank erosion, it is valuable to understand how rivers work, and how the history of rivers has led to their form today. Collaboration between the Cochecho River Local Advisory Committee and the Strafford Regional Planning Commission has brought together a panel of water resource specialists to discuss river basics and the upcoming Mad River restoration project. This workshop is intended for anyone interested in learning more about why rivers do what they do and how to support the continued river work in Farmington.

DATE

Wednesday, June 19th

TIME

7:00PM-9:00PM

RSVP
