

# Community Training in Ecological Design

Solution-based training for New Hampshire Community Leaders and Professionals using Permaculture Design Principles

Join Steve Whitman, Lauren Chase-Rowell, Mary Tebo Davis and Stacey Doll as they lead you through a new and innovative training on Ecological Solutions for NH Communities. Developed from the full Permaculture Design Certification course curriculum, the training is geared toward town staff and community leaders and will provide you with the necessary tools to plan, design and develop a more resilient and sustainable future for your town's infrastructure and economy while working in harmony with the natural world. Utilizing Permaculture Design Principles, you will be led through a series of conversations, participatory activities, case study field trips, and a design charette to introduce the ecological design process. Participants will learn about appropriate technologies, scale, biodiversity, integrated design, and stacking functions in an effort to develop skills as an ecological designer and permaculturist for your community. Each participant will leave the training with the tools to work through the planning and development process within their community, and on their own personal property, that provide solutions for a better tomorrow. CEUs credit has been submitted and is pending for AICP CM, AIA, NH Certified Professional Landscapers and NOFA Organic Landcare Practitioners. Please register on-line as space is limited. You can pay by credit card, electronic check, or forward us a paper check. To register, visit:
